Code Difference Analysis

EXACT CHANGES

1. Line 56: `L\_SLNO := J.SLNO;` is removed in the modified code.
2. Line 57: `L\_TOTAL\_AMT := NVL(L\_TOTAL\_AMT, 0) + NVL(L\_AMT, 0);` is replaced with `L_TOTAL_AdT := N

LOGIC IMPACT

The changes do not significantly impact the logic flow of the code. The removed line (`L_SLNO := J.S

DATA IMPACT

The changes do not significantly impact data processing. The removed line (`L\_SLNO := J.SLNO;`) was

BUSINESS IMPACT

The changes do not significantly impact business rules and outcomes. The replaced line (`L_TOTAL_AMT

RISK ASSESSMENT

The changes introduce no significant risk for bugs or issues. The removed line (`L\_SLNO := J.SLNO;`)

RECOMMENDATIONS

1. Review the code to ensure that the removed line (`L\_SLNO := J.SLNO;`) was not critical to the cod
2. Verify that the replaced line (`L\_TOTAL\_AdT := NVL(L\_TOTAL\_AMT, 0) + NVL(L\_AMT, 0);`) updates `L_

Severity: MINOR

Code Logic Analysis

Technical Analysis Report

1. PRIMARY PURPOSE:

The primary purpose of this PL/SQL code is to calculate and validate the total amount (L_TOTAL_AMT)

2. KEY COMPONENTS:

Main variables:

* L_DECIMAL: A decimal value retrieved from lhs4_client.GET_AMT_DECIMAL(a_entity_code)

* L_SUM_AFIELD1: A running sum of AFIELD1 values

* L_SLNO: The current SLNO value

* L_VRNO: The current VRNO value

* L_TOTAL_AMT: The total amount calculated for the given entity and transaction code

* L_AMT: The amount calculated for each iteration

Cursors:

* C_VR: A cursor that retrieves data from NAFHEAD_TRAN table based on entity code, transaction code,

* C_P: A cursor that retrieves data from NAFHEAD_TRAN table based on entity code, transaction code,

Loops:

* FOR loop that iterates over the results of C_VR cursor

* FOR loop that iterates over the results of C2 cursor (declared within the inner loop)

Conditions:

* IF statement to check if L_TOTAL_AMT is equal to I.NAFIELD; if not, NULL is executed

3. DATA OPERATIONS:

The code accesses the following tables:

- * NAFHEAD_TRAN

- * itemTRAN_BODY

- * acc_year_mast

Data retrieval and modification operations include:

- * Retrieving data from C_VR and C_P cursors

- * Calculating L_SUM_AFIELD1, L_AMT, and L_TOTAL_AMT values

- * Updating L_SLNO value

****4. CONTROL FLOW:****

The code has the following control flow:

- * The outer FOR loop iterates over the results of C_VR cursor

- * The inner FOR loop iterates over the results of C2 cursor (declared within the outer loop)

- * The IF statement is executed after the inner loop completes

Error handling:

- * No explicit error handling is present in the code; however, the use of cursors and loops may lead

****5. OUTPUT/RESULTS:****

The code produces no explicit output; however, it calculates and validates
